

ELIMINATE FROZEN WATER METERS

Select Products' Meter Jackets are custom-molded polystyrene insulators that protect water meters from freezing. Each jacket is precision-molded to match most major residential water meter brands.

FITS OVER COUPLING NUTS • EASY TO READ • TIGHT FIT • CUSTOM MOLDED

1-2-3 INSTALLATION

Easy to install with no disconnections necessary. Meter Jackets are easily assembled in service.

- 1 Position the Meter Jacket around the meter.**
- 2 Snap the Meter Jacket closed.**
- 3 Fasten the easy-grip straps around each end.**

Complete Protection

Meter Jacket provides a custom-fit insulating layer which covers the meter body and coupling nuts for optimal thermal protection. We have jackets that fit most major residential water meter models.

Cost-Effective Solution

A Meter Jacket costs roughly the same as a meter bottom plate but offers critical freeze protection for your meters. It safeguards the internal measuring chamber from freeze damage—an affordable solution to a costly problem.

Durable & Reusable

Your Meter Jacket acts as an impenetrable shield against the elements, providing a lifetime of service. Expanded polystyrene material can be reused if undamaged during meter changeouts.

Flammability: Expanded polystyrene (EPS) insulation is combustible and should not be exposed to flame or other ignition sources.

Solvent Attack: EPS insulation is subject to solvent attack. Caution should be taken that all petroleum-based solvents in materials have evaporated before allowing them to come in contact with EPS materials.

Ultraviolet Degradation: Prolonged exposure to sunlight will cause a slight discoloration of EPS insulation. The insulating properties of EPS will not be significantly affected unless exposure is so excessive that thickness is lost. To prevent ultraviolet degradation, EPS insulation should be covered if it is to be stored in the open for extended periods.
